Erze Ambalaj A.Ş. - Leveraging 40 Years of Expertise in the Packaging Industry with Our Latest Investment

At Erze Ambalaj A.Ş., we continuously enhance our technological capabilities to align with the rapid advancements in the global market and to exceed consumer expectations. Our state-of-the-art machinery enables us to execute high-capacity production efficiently.

Our newly established facility, located in the 2nd Organized Industrial Zone in Şanlıurfa, stands as one of the most advanced and technologically equipped factories in Europe. This investment has significantly expanded our production capacity, incorporating the latest technological innovations.

Erze Ambalaj A.Ş. has demonstrated its success not only in the domestic market but also in international markets. Our investments in the Şanlıurfa region have created substantial employment opportunities and have positioned the region as a significant contributor to national export potential.

Our Vision

As we look to the future, Erze Ambalaj A.Ş. is committed to becoming the leading brand in the Turkish Food Packaging industry. With four decades of experience and world-class production standards, we are dedicated to advancing our role in corporate social responsibility. Through deliberate and essential actions, we contribute to building a professional culture that supports the needs of modern society. We take pride in our work, embracing a shared belief in our mission.

Our goal is to consistently produce high-quality, hygienic products that prioritize environmental sustainability and consumer health. Our high-capacity production capabilities, driven by cutting-edge technology, ensure we meet these standards.

Collaborating closely with our customers, we aim to address their current needs while proactively anticipating their future requirements. This

Discover the VAREX II

Your advantages

Produce a wide product portfolio with one machine

Use the largest process window of all machines on the market

Produce demanding applications like barrier, sticky and very wide film

Typical Film Applications Include

Consumer Packaging: with food-contact

Consumer Packaging: non-food

Industrial Packaging

Specialties, like barrier, stretched film (MDO), sticky film, wide film

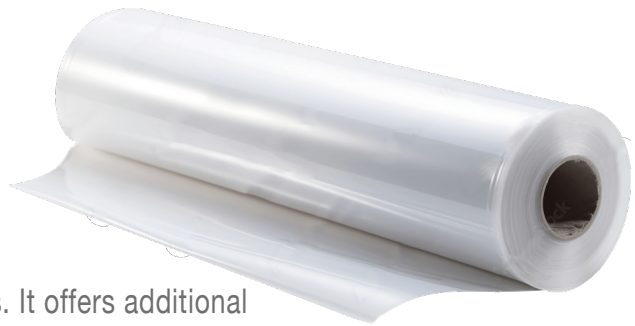
7 *Layers*

Polyethylene Lamination Film

Advanced Solutions for Protecting and Securing Your Products
High-Performance Packaging and Protection

Our Polyethylene Lamination Film is engineered to maximize customer satisfaction and ensure the optimal protection of your products. Recognized as one of the most innovative and reliable solutions in the industry, this film offers superior protection, enhanced aesthetics, and exceptional durability, contributing to the quality and longevity of your products.

Why Choose Polyethylene Lamination Film?



- **Superior Protection:** Our Polyethylene Lamination Film provides an effective barrier against moisture, dirt, UV rays, and chemical exposure. This ensures that your products maintain their freshness and high quality over extended periods.
- **Flexibility and Durability:** Designed with high flexibility and excellent tensile strength, this film adapts to various packaging requirements. It offers additional security during transportation and storage, significantly enhancing product safety.
- **Transparent and Aesthetic Appearance:** Available in both transparent and opaque options, this film allows you to highlight your product's appearance or provide a professional, modern look.
- **Eco-Friendly:** The film is fully recyclable, making it a responsible choice for businesses focused on sustainability.
- **Cost-Effective Solutions:** Combining high performance with cost efficiency, our Polyethylene Lamination Film offers robust protection without exceeding your budget.
- **Food and Beverage:** Ideal for packaging fresh foods and beverages, maintaining hygiene, and extending shelf life.
- **Cosmetics and Pharmaceuticals:** Ensures the protection of delicate products while meeting aesthetic packaging needs.
- **Electronics and Furniture:** Safeguards electronics and furniture, keeping them in pristine condition.
- **Construction and Building:** Provides durable, waterproof coatings for construction materials.

Ease of Storage and Use

To maintain its high performance and extend its lifespan, our Polyethylene Lamination Film should be stored in a cool, dry place, away from direct sunlight. Its ease of processability ensures that your packaging operations are both efficient and effective.

OUR PRODUCTS

MDO
Polyethylene Film

Maximize Your Product's Protection with MDO Polyethylene Film

MDO Polyethylene Film offers superior strength, barrier protection, high transparency, and printability, making it the ideal choice for durable, attractive, and brand-enhancing packaging that extends product shelf life and meets diverse customer needs.

Why Choose Polyethylene Lamination Film?

- **Unmatched Strength:** Its machine-direction orientation provides extra durability, resisting tears and punctures to keep your products safe during shipping and handling.
- **Superior Barrier:** Protects against oxygen and moisture, extending shelf life and maintaining product freshness giving your customers confidence in your brand.
- **Crystal Clear:** High transparency showcases your products beautifully, making them more appealing on the shelf.
- **Versatile Flexibility:** Perfect for a variety of packaging needs, offering durability without compromising on appearance or quality.

Perfect For:

Food Packaging: Ensures your fresh food and beverages stay fresher longer, meeting consumer expectations.
Industrial Packaging: Safeguards chemicals, textiles, and other materials, ensuring they reach your customers in perfect condition.
Indoor & Outdoor Use: Reliable protection whether your products are stored indoors or exposed to the elements.

Customer Benefits:

Longer Shelf Life: Your products stay fresh and sellable for longer periods, reducing waste and increasing customer satisfaction.
High Performance: Provides consistent protection, ensuring your products arrive in excellent condition.
Enhanced Presentation: The film's clear, attractive finish makes your products stand out, driving sales and boosting brand perception.

Easy to Store and Handle:

Simple Storage: Keep it in a cool, dry place to maintain its quality and performance.
Gentle Handling: Designed for easy use, minimizing the risk of damage during packaging.

PE for Frozen Applications

Frozen Polyethylene Film is a specialized type of polyethylene film designed to maintain its performance and integrity in extremely cold conditions. This film is particularly suited for applications in the frozen food industry, where it is used to package products that need to be stored or transported at low temperatures.

Key Features:

- **Cold Resistance:** Specifically engineered to withstand low temperatures without becoming brittle or losing flexibility.
- **Barrier Properties:** Provides excellent protection against moisture, air, and contaminants, ensuring that frozen products remain fresh and free from freezer burn.
- **Clarity:** Often available in transparent forms to showcase the product inside, while still providing robust protection.
- **Durability:** Offers high tensile strength and puncture resistance to protect products during handling and transportation.

Applications:

- **Frozen Food Packaging:** Ideal for wrapping and sealing frozen food items to extend shelf life and prevent freezer burn.
- **Cold Storage:** Used for packaging products stored in deep freezers or cold storage facilities.
- **Logistics:** Ensures that products maintain their quality throughout the supply chain, from production to end-user.

Benefits:

- **Enhanced Product Protection:** Safeguards frozen goods from environmental factors and physical damage.
- **Cost-Effective:** Provides a reliable, economical solution for packaging frozen items.
- **Versatility:** Suitable for a wide range of frozen food products, including meats, vegetables, and prepared meals.

Storage and Handling:

- **Proper Storage:** Store the film in a cool, dry place to prevent any premature degradation.
- **Handling:** Handle carefully to avoid damage, especially in extremely cold environments.

Barrier
Lamination Film (EVOH PE)

Barrier polyethylene lamination film is a specialized type of film designed to protect products from moisture, oxygen, light, and other external factors. With its multi-layered structure, it provides high-performance barrier properties and offers solutions for various packaging needs.

Key Features:

- **Excellent Barrier Properties:** Minimizes the transmission of oxygen, moisture, and light, keeping products fresh and preventing spoilage.
- **Durability:** Provides high tensile strength and puncture resistance, ensuring the packaging is resilient against physical damage.
- **Clarity and Aesthetics:** Often available in transparent or matte finishes, highlighting the product and providing an aesthetically pleasing package.
- **Multi-Layered Structure:** Produced using advanced coating and lamination technologies to enhance barrier performance.

Applications:

- **Food and Beverage Packaging:** Ideal for packaging fresh foods, beverages, and other sensitive products, extending shelf life and maintaining quality.
- **Pharmaceuticals and Cosmetics:** Ensures the safety and quality of pharmaceuticals and cosmetics.
- **Industrial Uses:** Provides protective packaging solutions for chemical products and other industrial items.

Benefits:

- **Long-Term Protection:** Keeps products fresh and preserves their quality over extended periods.
- **Enhanced Security:** Protects products from external factors, improving product safety.
- **Aesthetic and Functional:** Offers both aesthetic appeal and functional benefits, making it versatile for various Packaging applications.

Storage and Handling:

- **Proper Storage:** Store the film in a cool, dry place and protect it from direct sunlight to prevent premature degradation.
- **Handling:** Handle with care during application to avoid damage and ensure optimal performance.

PEEL
Polyethylene (PE) Film

PEEL Polyethylene (PE) Film is a type of polyethylene film designed for easy removal or peeling from surfaces. This film is commonly used in applications where a protective layer needs to be removed before the product is used or displayed

Key Features:

- **Easy Peel-off:** Engineered to allow for smooth and effortless peeling, ensuring quick and clean removal from surfaces.
- **Adhesion Control:** Designed with controlled adhesion properties to stick securely during use but peel off without leaving residues or damaging the underlying surface.
- **Durability:** Provides protection during handling, shipping, and storage while maintaining its integrity until removal.
- **Clarity and Aesthetics:** Often available in clear or translucent forms to showcase the product beneath while protecting it.

Applications:

- **Protective Covers:** Used as a protective cover for surfaces such as screens, displays, or machinery, which need to be protected during manufacturing or shipping.
- **Product Labeling:** Applied as a peel-off label or sticker that can be easily removed once the product is ready for use or sale.
- **Packaging:** Utilized in packaging solutions where a protective layer needs to be removed before accessing the actual product.

Benefits:

User-Friendly: Simplifies the process of removing protective layers or labels, improving convenience and efficiency.
Surface Protection: Keeps surfaces free from scratches, dust, and other contaminants during production and transport.

- **Versatile:** Suitable for various applications, including electronics, consumer goods, and industrial products.

Storage and Handling:

- **Proper Storage:** Store the film in a cool, dry place to prevent deformation or adhesion issues. Keep away from direct sunlight and extreme temperatures.
- **Handling:** Handle with care to avoid damage to the film and ensure it performs effectively when peeled off.

Antistatic
Polyethylene (PE) Film

Antistatic polyethylene (PE) film is a type of polyethylene film specifically formulated to prevent the accumulation of electrostatic charges. This film is designed to protect sensitive electronic components and other products susceptible to static electricity, ensuring their safe handling and storage.

Key Features:

- **Antistatic Properties:** Contains special additives that prevent the buildup of electrostatic charges, thus reducing the risk of static electricity affecting products.
- **Surface Protection:** Protects products from physical damage, dust, and contaminants, keeping them clean and secure.
- **Clarity:** Typically available in transparent or semi-transparent forms, allowing visibility of the product while providing protection.
- **Durability:** Offers a robust structure to protect products during handling and storage.

Applications:

- **Electronic Products:** Used for packaging and protecting electronic components and devices that are sensitive to static electricity.
- **Manufacturing and Assembly:** Helps prevent static electricity buildup during production and assembly processes, improving product quality.
- **Computer and Telecommunications:** Provides protective packaging solutions for computer hardware, telecommunications equipment, and other sensitive products.

Benefits:

- **Static Electricity Protection:** Safeguards electronics and other sensitive items from static electricity damage.
- **High Cleanliness:** Ensures that products remain clean and undamaged during storage and transport.
- **Versatility:** A versatile film suitable for a variety of applications requiring static protection.

Storage and Handling:

- **Proper Storage:** Store the film in a cool, dry, and clean environment. Minimize contact with metal or other conductive materials to avoid static charge buildup.
- **Handling:** Handle the film carefully to maintain its antistatic properties and ensure effective protection for sensitive products.

Standard
Laminating Film

Standard laminating film is a versatile type of film used to protect and enhance various surfaces. Available in both matte and glossy finishes, this film is ideal for a wide range of applications, from documents to cards.

Key Features:

- **Surface Protection:** Shields paper, cardboard, and other surfaces from water, dust, dirt, and wear, extending the lifespan of the items.
- **Matte and Glossy Options:** Offers both matte and glossy finishes to suit aesthetic preferences and functional needs.
- **Easy Application:** Can be easily applied using laminating machines, providing a smooth and professional finish.
- **Durability:** Provides high durability, ensuring long-term protection for documents and materials.

Applications:

- **Document Protection:** Used for protecting printed materials such as certificates, documents, business cards, and brochures.
- **Food Packaging:** Ensures hygienic protection for food products.
- **Art and Graphics:** Enhances and protects artworks and graphics, improving their appearance and longevity.

Benefits:

- **Long-Term Protection:** Guards items from water, dirt, and wear, allowing them to be used for a longer time.
- **Aesthetic Improvement:** Enhances visual appeal with matte or glossy finishes.
- **Cost-Effective Solution:** Offers high performance at a reasonable cost, making it an economical choice for protection.

Storage and Handling:

- **Proper Storage:** Store the film in a cool, dry, and clean environment. Keep it free from dust or debris that could affect the adhesive and film surface.
- **Handling:** Handle carefully during application to avoid air bubbles or wrinkles and ensure a smooth, professional finish.
